Ambitious Ambition

1970s – 1990s – Today

If we help countries put in place the supply chain fundamentals...

...then vaccines will be

Available
In the right place at the right time

Potent
Providing a high level of immunity

...and systems will be

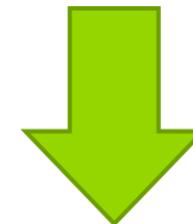

Efficient
Resources used for best purpose

...helping to achieve improvements in:

Vaccine coverage & equity

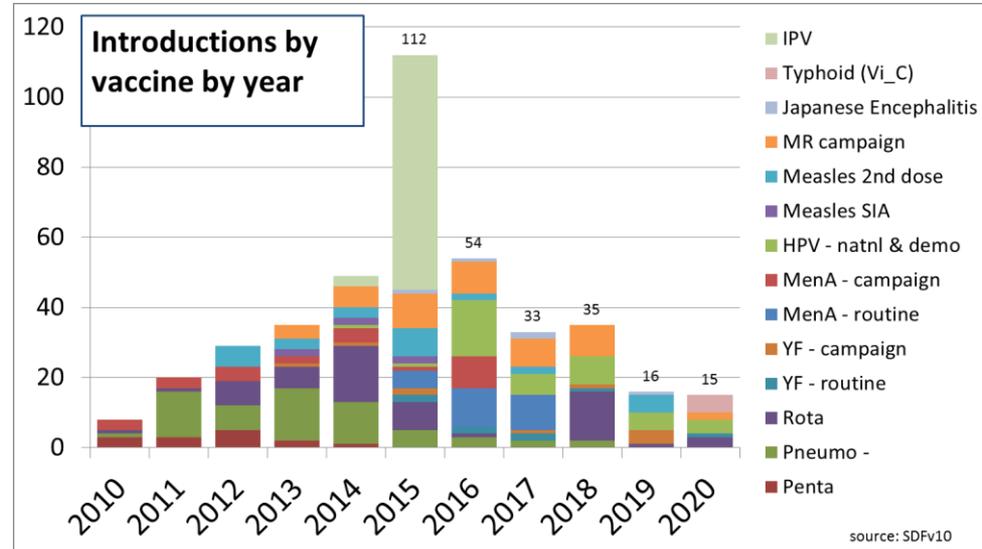

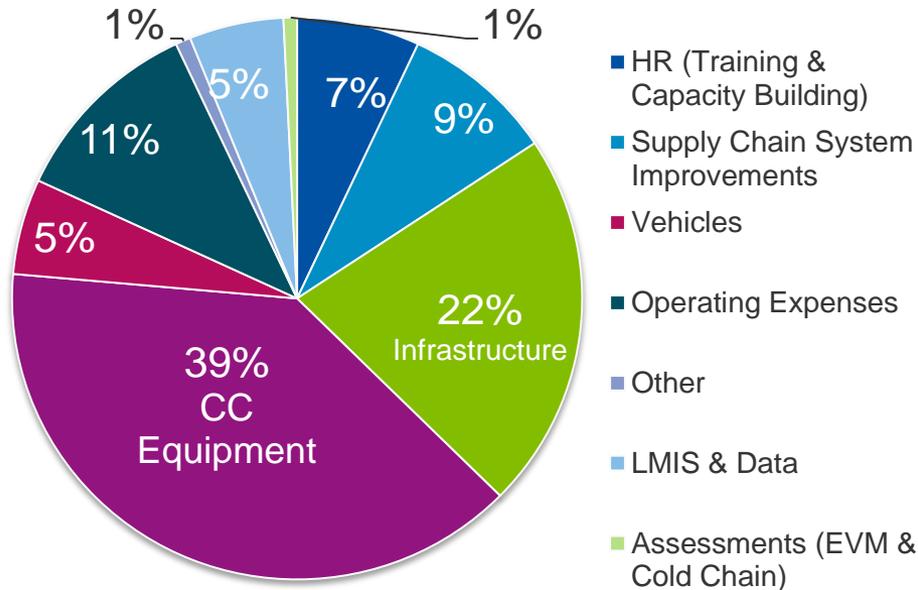

Under-5 mortality

Deliver Impact

Sustainable improvements to coverage & equity

\$203M in supply chain strengthening investments

Country proposals recommended for approval 2012-2014

150 projected vaccine introductions 2016-2020

Focused Urgency

Implementation Plan aligning Alliance partners and resources towards shared 2020 outcomes

At least 10 countries have followed **an evidence-based design process** to improve effectiveness and addresses sustainable management of vaccines and other health commodities

All countries **implementing a comprehensive immunisation SC management plan**, incorporated in national strategic plans and budgets

Right equipment is in the right place to meet current and planned vaccines, decreased maintenance requirements and lower running costs; Robust equipment management systems are in place.

Countries have **dedicated and competent immunisation supply chain leaders**, with adequate numbers of skilled, competent, accountable, motivated, and empowered personnel

All countries using **data to oversee and manage** key aspects of their immunisation supply chain, including availability, storage and transport quality, and efficiency

THANK YOU
