- Write batch # and date after immunization, Vitamin A and Albendazole are given.
- If an immunization is late, you only need to wait for 4 weeks before giving the next dose.
- If a child has diarrhoea or a fever of less than 38 degrees C, you should still give the scheduled immunization
- Measles and Rubella

IMMUNIZATION, VITAMIN A AND ALBENDAZOLE INFORMATION

Abbreviation	Name	Dosage	Function	
BCG	Bacille Calmette Guarin	0.05ml	Protects against childhood TB, Miliary and Extrapulmonary TB.	
HepB1	Hepatitis B (birth dose)	0.5ml	Protects against Hepatitis B Virus Infection.	
Pentavalent (DPT, HepB, Hib)	Diptheria, hepatitis B, Haemophilus Influenza type B	0.5ml	Protects against Diphtheria, whooping cough, tetanus, Hepatitis B, Pneumonia and Meningitis due to Haemophilus Influenza type B.	
OPV	Oral polio vaccine	2 oral drops	Protects against Poliomyelitis (polio).	
IPV	Injectable Polio Vaccine	0.5ml	Protects against Poliomyelitis (polio).	
PCV13	Pneumococcal containing vaccine	0.5ml	Protects against Pneumococcal Pneumonia and Meningitis.	
RV	Rotavirus	6-7 oral drops (entire 1.5 ml vial)	Protects against Rota virus diarrhoea.	
M and Rubella	Measles and rubella containing vaccines	0.5ml	Protects against Measles and Rubella.	
π	Tetanus toxoid	0.5ml	Protects against Tetanus	
Vita A	Vitamin A	<6 m = 50,000IU 6m-11m = 100,000IU >12m = 200,000IU	Protects against night blindness, xeropthalmia and total blindness	
Albendazole	Albendazole	12m-23m = 200mg >24m = 400mg	Protects against hookworms, whip worms and round worms.	

Note

- Hepatitis B (birth dose) must be given within 24 hours after birth or within four (4) weeks after birth.
- Give BCG at first contact.
- Pentavalent, OPV and rotavirus must be given at 6 week, 10 weeks and 14 weeks of life with a minimum of 4 weeks intervals. Injectable Polio Vaccine must be given at 14 weeks
- Measles vaccine must be given as soon as the child turns 12months (1 year) old.

CARING FOR SICK CHILDREN - GIVING GOOD HOME CARE.

For ANY sick child:

- If child is breasted, breastfeed more frequently and for longer at each feed.
- If the child is taking breast milk substantiates, increase the amount of milk given.
- Increase other fluids. You may give soup, rice, water, yogurt drinks or clean water. Give these fluids as much as the child will take. Give frequent small sips from a cup.
- If the child vomits, wait 10 minutes then continue but more slowly.

Exclusively breastfeed the young infant:

- Give only breastfeeds to the young infant.
- Breastfeed frequently, as often, and for as long as the infant wants.

Make sure that the young infant is kept warm at all times

 In cool weather cover the infant's head and feet and dress the infant with extra clothing.

For child with diarrhoea:

- Breastfeed frequently and for longer at each feed.
- Give fluids:
 - ☐ Oral Rehydration Salts (ORS)
 ☐ Food based fluids, such as soup, rice water, yogurt drinks.
 ☐ Clean water
- Give zinc supplement, if the child is aged more than 2 months and if zinc is given.
- Continue giving extra fluid until the diarrhoea stops.

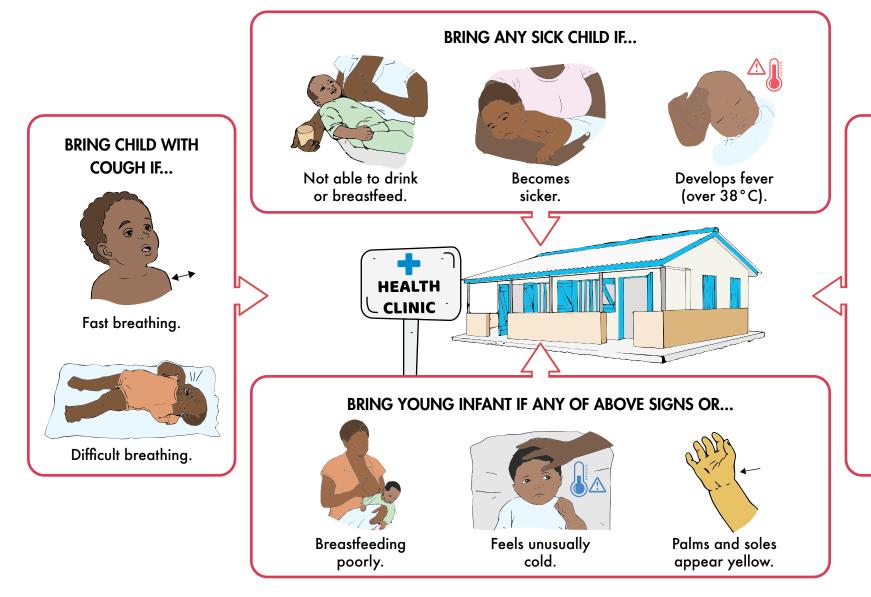

• Dispose child's stool hygienically.

When to return to clinic immediately.

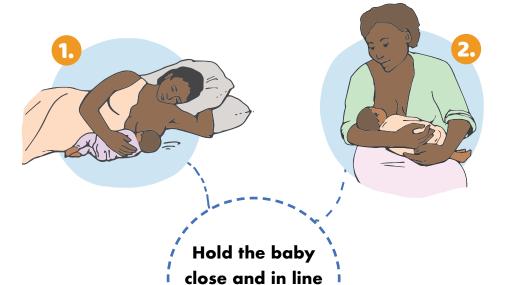

BREASTFEEDING INFORMATION - POSITION

Lying down on side position

Helps a mother to rest. Comfortable after a Caesarean section. Take care that the baby's nose is on a level with mother's nipple, and that baby does not need to bend their neck to reach the breast.

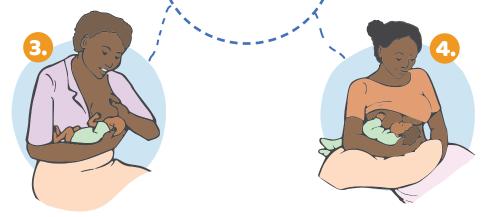

Cradle position

The baby's lower arm is tucked around the mother's side, not between the baby's chest and the mother. Take care that the baby's head is not too far into the crook of the mother's arm that the breast is pulled to one side making it difficult to stay attached.

Cross arm position

Useful for small or ill baby. Mother has good control of baby's head and body, so may be useful when learning to breastfeed. Take care that the baby's head is not held too tightly preventing movement.

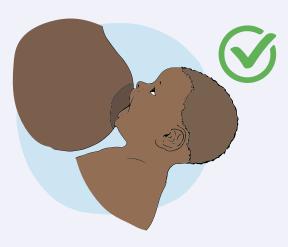

with your body.

Underarm position

Useful for twins or to help to drain all areas of the breast. Gives the mother a good view of the attachment. Take care that the baby is not bending their neck forcing the chin down to the chest.

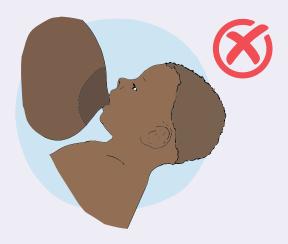

BREASTFEEDING ATTACHMENT

Signs of <u>GOOD</u> attachment and feeding.

- Chin touching breast.
- Mouth open wide.
- Lower lip turned outwards.
- More areola visible above than below the mouth.
- ▶ Slow, deep sucks and swallowing sounds.
- Cheeks full and not drawn in.
- Baby feeds calmly.
- Baby finishes feed by him/herself and seems satisfied.
- Mother feels no pain.

Signs of <u>POOR</u> attachment and feeding.

- Chin away from breast.
- Mouth not wide open.
- Lower lip pointing forward or turned in.
- More areola visible below than above the mouth, or equal amounts.
- Rapid, shallow sucks and smacking or clicking sounds.
- Cheeks drawn in.
- Baby fusses at breast or comes on and off.
- Baby feeds very frequently, for a very long time, but does not release breast and seems unsatisfied.

Baby. Age: birth up to 6 months

- Feed your baby only breast milk until they are 6 months of age.
- Breastfeed as often as the baby wants, day and night, at least 8 times in 24 hours.
- Breastfeed when your baby shows signs of hunger: beginning to cry, sucking fingers, or moving their lips.
- At each feeding, encourage your baby to empty the breast and then offer the other breast.
- Do not give your baby other foods or fluids. Breast milk has everything your baby needs and satisfies their hunger and thirst.

Infant. Age: 6 months to 1 year

Age	Food	Frequency	Amount	Additional information
6-8 months	Well mashed food like kumara or banana with finely chopped egg, seafood or meat, plus green vegetables and fruit.	2- 3 times per day plus frequent breastfeeding. Give 1-2 snacks between meals depending on their appetite.	2 to 3 tablespoons and gradually increase to ½ cup.	By 8 months give small chewable items to eat with fingers. Let the child feed themselves, but provide help.
9-11 months	Finely chopped or mashed foods from all food groups each day. Try foods that baby can pick up.	3-4 meals per day plus frequent breastfeeding. Give 1- 2 snacks between meals depending on their appetite.	About ½ cup.	Ensure the child is getting plenty of meat, chicken, egg and seafood.

Remember to wash your hands with soap and water before preparing your baby's food and before feeding them.

Child. Age: 1 to 2 years

Age	Food	Frequency	Amount
12-24 months	 At each meal local staple food like pana, taro or banana along with: Some protein like fish, egg, chicken, meat, nuts or shells A variety of different coloured vegetables Give plenty of fruit for snacks All food should come from the list on page 10. 	3-4 meals per day. Also give 1-2 snacks per day between meals depending on their appetite.	3/4 - 1 cup
		1	

- Breastfeed often as your child wants up to 2 years or beyond.
- Feed them from their own plate or bowl. Continue to actively help them to eat.
- ▶ **Give many different colored foods for the best health.** Children need to eat plenty of colored fruits and vegetables to prevent them getting sick.

Remember to wash your hands with soap and water before preparing your baby's food and before feeding them.

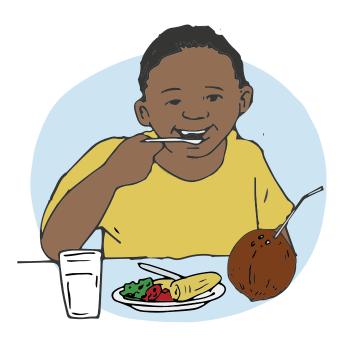

Child. Age: 2 to 5 years

Give the same foods your family eats at 3 meals each day. Also, twice daily between meals, give nutritious snacks such as:

- Bananas
- Breadfruit
- Pawpaw
- Bread or bun with banana, avocado or nut paste inside
- Cassava pudding
- Ngali Nuts or peanuts
- Popped corn

Offer a variety of foods. If they refuses a new food, offer them "tastes" of it several times. Show them that you like the food.

Do not force your child to eat. Give realistic portions depending on their age, size and activity level. Increase the quantity of food as they grow older.

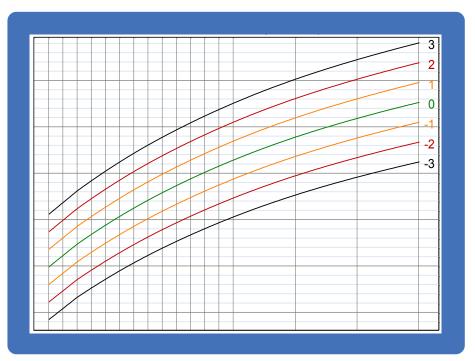

UNDERSTANDING GROWTH CHART

Normal growth in individual children can vary a great deal. Plotting a child's measurements over time on growth charts can show whether a child is growing normally or not.

A health care provider weighs and measures your child and records these measurements. Then the child's measurements are plotted as dots on the charts. Measurements taken at later visits are also plotted, and the dots are joined by a line. This line is your child's growth curve or trend.

- The line labeled 0 on the growth chart is the median which is, generally speaking, the average. The other lines, called z-score lines, indicate distance from the average. A point or trend which is far from the median, such as 3 or −3, indicates a growth problem.
- The growth curve of a normally growing child will usually follow a track that is roughly parallel to the median. The track may be above or below the median.
- Any quick change in trend (the child's curve veers upward or downward from its normal track) should be investigated to determine its cause and remedy any problem.
- A flat line indicates that the child is not growing. This is called stagnation and may also need to be investigated.
- A growth curve that crosses a z-score line may indicate risk.

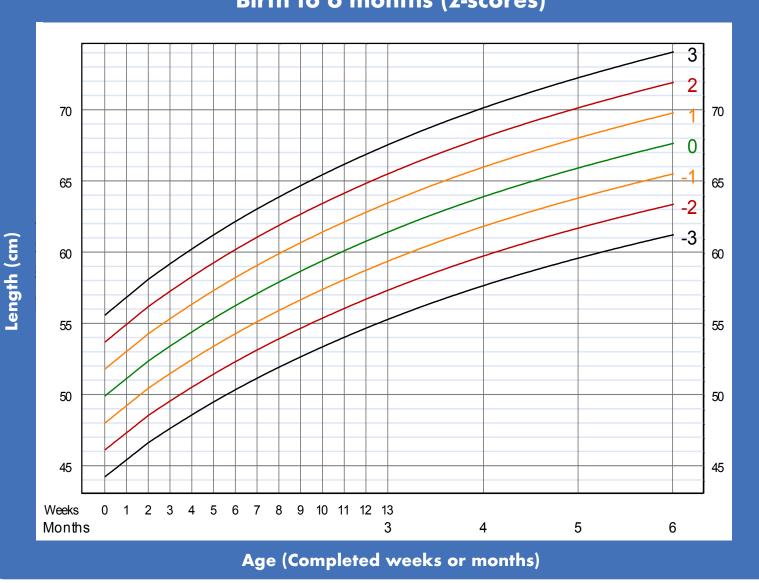

GROWTH PROBLEMS SUMMARY

	Growth indicators					
Z-score	Length/height-for-age	Weight-for-age	Weight-for-length/height	BMI-for-age		
Above 3	See note 1		Obese	Obese		
Above 2		See note 2	Overweight	Overweight		
Above 1			Possible risk of overweight (see note 3)	Possible risk of overweight (see note 3)		
0 (median)						
Below - 1						
Below - 2	Stunted (see note 4)	Underweight	Wasted	Wasted		
Below - 3	Severely stunted (see note 4)	Severely underweight (see note 5)	Severely wasted	Severely wasted		

Notes:

- 1. A child in this range is very tall. Tallness is rarely a problem, unless it is so excessive that it may indicate an endocrine disorder such as a growth-hormone producing tumor. Refer a child in this range for assessment if you suspect an endocrine disorder (e.g. if parents of normal height have a child who is excessively tall for their age).
- 2. A child whose weight-for-age falls in this range may have a growth problem, but this is better assessed from weight-for-length/height or BMI-for-age.
- 3. A plotted point above 1 shows possible risk. A trend towards the 2 z-score line shows definite risk.
- 4. It is possible for a stunted or severely stunted child to become overweight.
- 5. This is referred to as very low weight in IMCI training module.

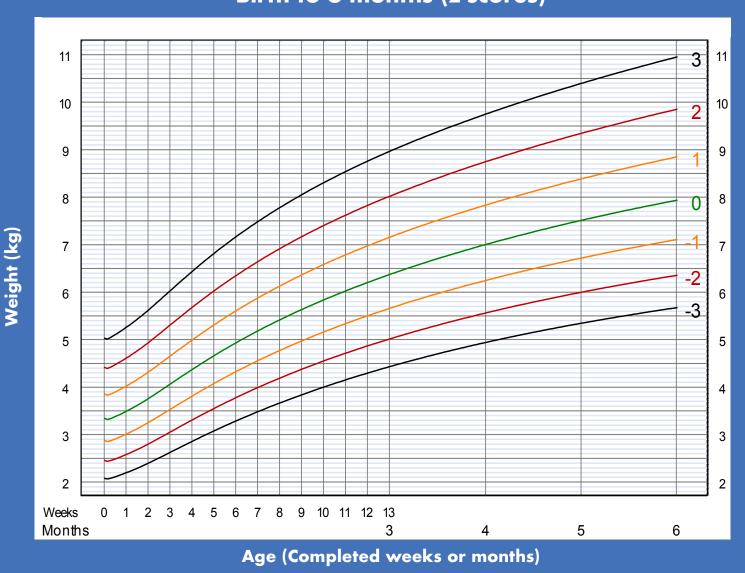

LENGTH-FOR-AGE: BOYSBirth to 6 months (z-scores)

This **Length-for-age** chart shows attained length relative to age in comparison to the median (O line).

- A child whose lengthfor-age is below the line −2 is stunted.
- ▶ Below –3 is severely stunted.

WEIGHT-FOR-AGE: BOYS Birth to 6 months (z-scores)

This **Weight-for-age chart** shows body weight relative to age in comparison to the median (0 line).

- A child whose weight-for-age is below the line –2 is underweight.
- Below -3
 is severely
 underweight.
 Clinical signs of
 marasmus or
 kwashiorkor may
 be observed.

WEIGHT-FOR-LENGTH: BOYS

Birth to 6 months (z-scores)

Weight (kg)

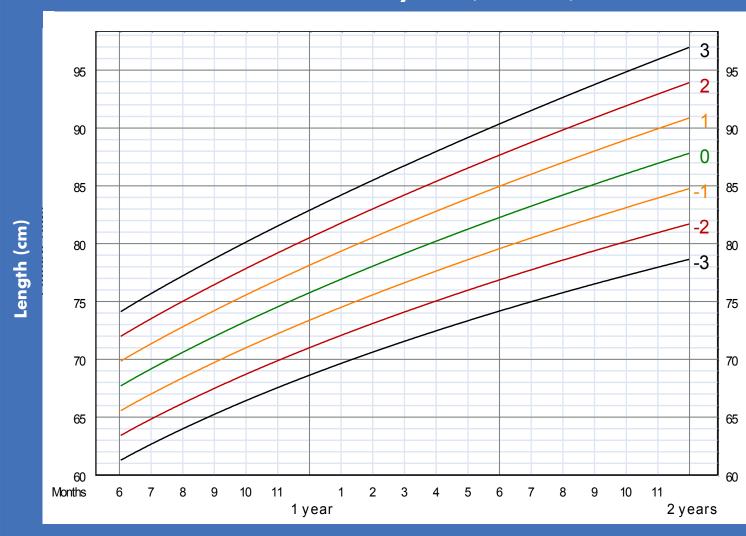

This **Weight-for-length** chart shows body weight relative to length in comparison to the median (0 line).

- A child whose weightfor-length is above the line 3 is **obese**.
- Above 2 is overweight.
- ▶ Below the line−2 is wasted.
- Below –3 is severely wasted.
 Refer for urgent specialized care.

Length (cm)

LENGTH-FOR-AGE: BOYS

6 months to 2 years (z-scores)

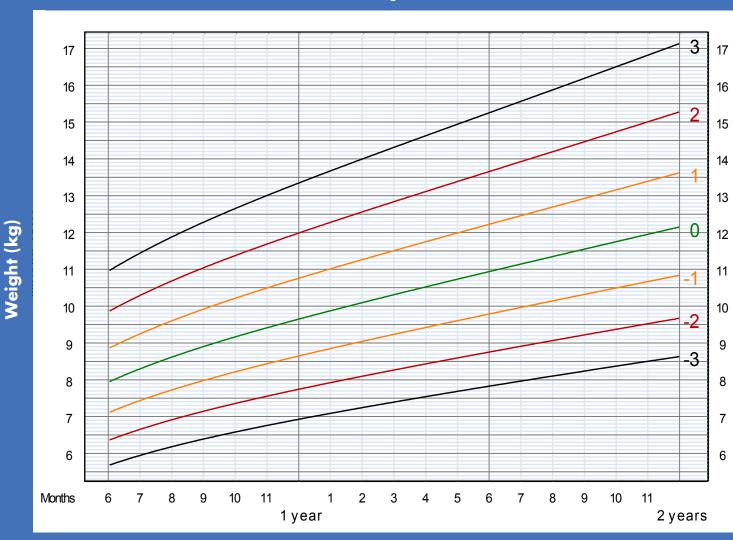

Age (Completed months and years)

This **Length-for-age** chart shows attained length relative to age in comparison to the median (0 line).

- A child whose lengthfor-age is below the line −2 is stunted.
- ► Below –3 is severely stunted.

WEIGHT-FOR-AGE: BOYS

6 months to 2 years (z-scores)

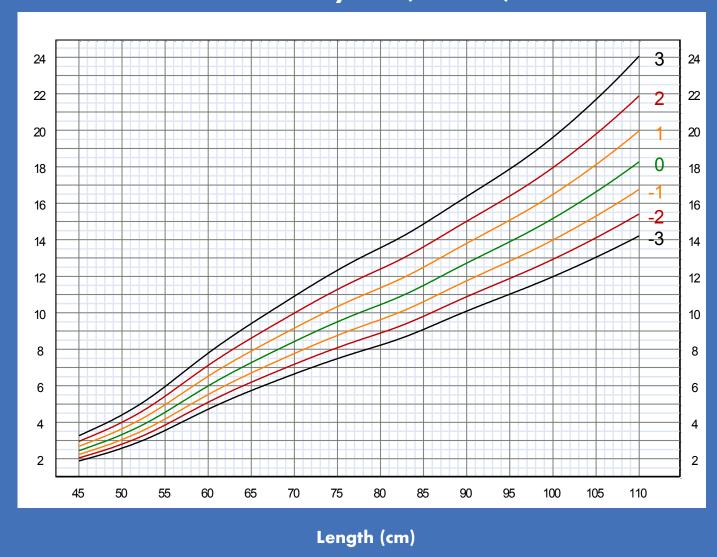

Age (Completed months and years)

This **Weight-for-age** chart shows body weight relative to age in comparison to the median (0 line).

- A child whose weight-for-age is below the line −2 is underweight.
- ▶ Below -3is severely underweight.
- Clinical signs of marasmus or kwashiorkor may be observed.

WEIGHT-FOR-LENGTH: BOYS

Birth to 2 years (z-scores)

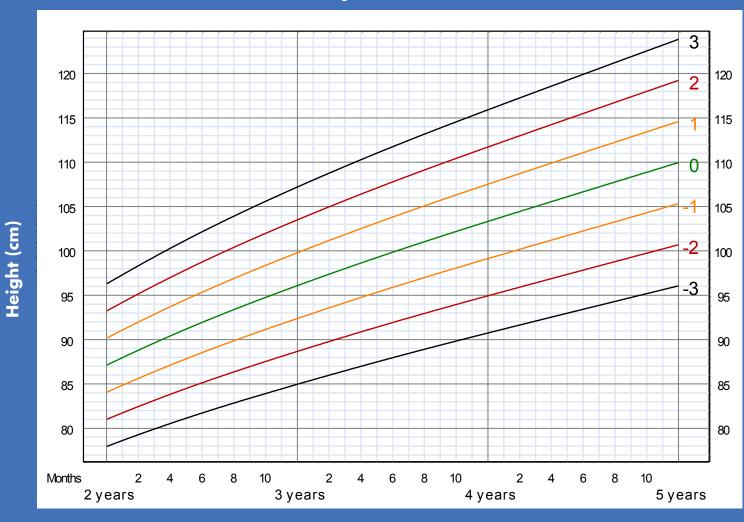

Weight (kg)

This **Weight-for-length** chart shows body weight relative to length in comparison to the median (0 line).

- A child whose weightfor-length is above the line 3 is **obese**.
- Above 2 is overweight.
- ▶ Below the line −2 is wasted.
- Below -3 is severely wasted. Refer for urgent specialized care.

HEIGHT-FOR-AGE: BOYS

2 to 5 years (z-scores)

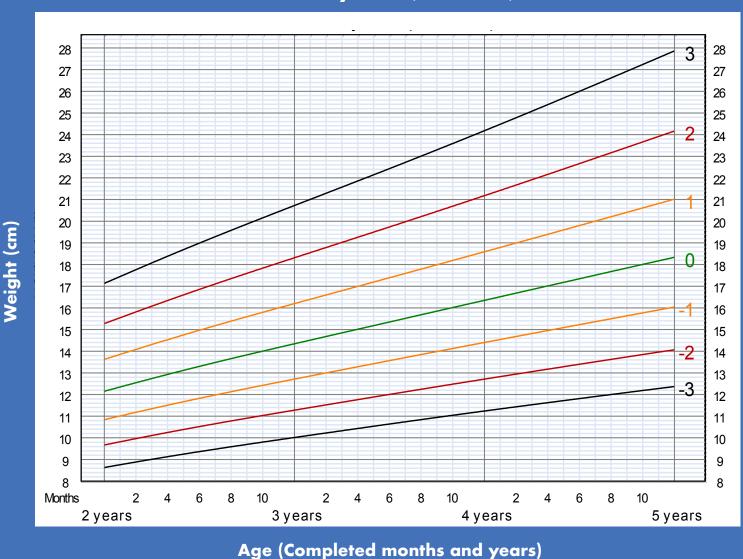

Age (Completed months and years)

This **Height-for-age** chart shows growth in height relative to age in comparison to the median (0 line).

- A child whose heightfor-age is below the line -2 is **stunted**.
- Below -3 is severely stunted.

WEIGHT-FOR-AGE: BOYS

2 to 5 years (z-scores)

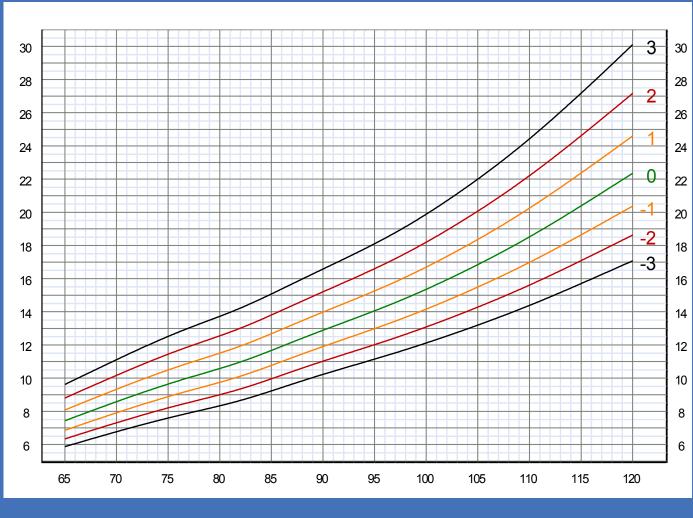

This **Weight-for-age** chart shows body weight relative to age in comparison to the median (0 lines).

- ► A child whose weight-for-age is below the line −2 is **underweight.**
- Below -3 is severely underweight.
 Clinical signs of marasmus or kwashiorkor may be observed.

WEIGHT-FOR-HEIGHT: BOYS

2 to 5 years (z-scores)

Weight (kg)

This **Weight-for-height** chart shows body weight relative to height in comparison to the median (0 lines).

- A child whose weightfor-height is above the line 3 is **obese**.
- Above 2 is overweight.
- ► Below the line –2 is **wasted**.
- Below –3 is
 severely wasted.
 Refer for urgent
 specialized care.

Length (cm)

GROSS MOTOR MILESTONES CHECKLIST

AGE: 1 Month						
Shows variety of arm and leg movement						
Shows startle reaction to loud noise e.g. clap hand close to baby's head						
Rooting and sucking reflex – Baby turns head when fingers stroked down on one side of mouth						
Placed on belly, baby will turn head to either side						
AGE: 3 Months						
On back, little or no head lag when pulled to sitting position						
Closes hand around adult finger placed in hand						
Makes some sounds, other than cry						
Smiles at familiar people						
AGE: 6 Months						
Rolls from back to tummy						
Transfers object from one hand to another						
Makes a range of sounds and laughs out loud						
Follows movements of objects and people with eyes						

AGE: 9 Months	
Sits with no help	
Uses hand to pick up small objects	
Response to own name by turning or looking	
Reacts to strangers differently from people baby knows	
ACF, 10 Marsha /1 Varrel	

AGE: 12 Months (1 Year)	
Pulls self to standing position	
Plays with objects, puts in and out of container	
Understands 'NO'	
Tries to help with putting own clothes on	

AGE: 1 Year 6 Months	
Walks without falling: beginning to run	
Knows 3 -5 body parts: can point to them	
Says some simple words	
Imitate simple actions eg waves bye-bye, clap hands	

AGE: 2 Years						
Can jump, put feet together						
Can match simple objects, e.g cups, spoons						
Asks for food and drink						
Uses 2 words together e.g me hungry						
AGE: 2 Years 6 Months						
Stands on tip toe: can kick a ball						
Uses one hand more than the other in activities						
Recognises boy or girl when asked						
Can take simple clothes off eg pants, vest						
AGE: 3 Years						
Throws and catches a ball						
Can copy a circle						
Uses three words together in sentences						
Joins in play with other children						

AGE: 4 Years	
Climbs trees and ladders	
Can draw a stick person	
Asks "how" and "why" question	
Understands directions and can take turns	
AGE: 5 Years	
AGE: 5 Years Can climb stairs; skips on alternate feet	
Can climb stairs; skips on alternate feet
